

The Resinator™

The Resinator® is a custom-engineered, saturation machine designed for use with CSNRI's field-saturated systems. Critical to proper installation of wet layup, field saturated composite repair systems, the Resinator controls the resin to cloth ratio ensuring the correct strength repair is carried out. The Resinator has proven itself to be a highly valuable tool, saving time and money, especially on large projects, and allows installation technicians to saturate at a much faster rate than via traditional hand saturation techniques.

By being portable and compact, the Resinator can be used in tight areas or on scaffolding with limited space. The Resinator can accommodate fiber widths up to 12", allowing effective and efficient installation on small or large structures.

APPLICATIONS

- Field saturating of dry fiber with various resins

SYSTEM COMPONENTS:

- Resinator (2-12" wide fabric capability)
- 12" Disposable Resinator tray*
- 6" Disposable Resinator tray*

*One Resinator tray included in each field-saturated composite kit. Additional trays available and sold separately.

BENEFITS:

- Simplifies saturation process
- Consistent resin to fiber ratios
- Saturate dry fiber up to 10 times faster than by hand
- Reduces time and labor costs on large projects

WARRANTY CSNRI routinely implements product improvements. Please contact your local distributor or office for the most current product specifications.
