

CSNRI Training & Field Services

CSNRI proudly stands behind our robust portfolio of innovative composite repair systems, and strive to ensure that they are effectively, successfully, and safely utilized. To do this, we provide training and field support services for the practical installation of our composite repair systems. By ensuring all installers are properly trained and certified, and by implementing a robust quality assurance program for composite repairs, you can be fully confident that they will be durable for decades.

CSNRI's training services includes:

- Certified Training Programs for:
(compliant with ASME PCC2 and ISO 24817)
 - Type A - Pipeline
 - Type B - Process Piping
- Veriforce Operator Qualification Evaluations
- Site Supervision - Quality Assurance

Certified training programs include:

- Instructor lead training
- Online training modules
- Online exam
- Hands-on experience and evaluation
- Certificate of completion

Type A Installer Certification

Type B Certification requires a hydrostatic pressure test of the students' training repairs.

Online Training Benefits

- Data is secure and always up to date.
- Training modules always available for viewing.
- Certificate available for downloading by the student at any time.
- Installation documents available on the platform.
- Automatic notifications about upcoming expiration of certificates.
- Online recertification options.

Operator Qualifications and Veriforce Evaluations

- CSNRI offers official Veriforce Evaluator services
- We can work with you on your company's specific OQ needs

Field Quality Assurance

A CSNRI technical trainer is available to be onsite during composite installations. These subject matter experts are there to document that quality measures were taken every step of the way.

Request training or field support
